

Phishing Email Detection & Awareness Report

Prepared by: Hemashree S

Task: Cyber Security Internship Task 2

Date: May 2026

Phishing Email Detection & Awareness Report

1. Introduction

This report analyzes phishing email samples to identify common attack techniques used by cyber attackers. The goal is to help users recognize and avoid phishing emails.

Phishing is a type of cyber attack where attackers send fake emails or messages that appear to come from trusted organizations in order to deceive users. The main goal of phishing is to steal sensitive information such as usernames, passwords, OTPs, credit card details, or other personal data.

Phishing attacks are dangerous because they exploit human trust rather than technical system weaknesses. Many users fall victim to phishing due to lack of awareness, urgency in messages, or failure to verify sender authenticity.

This report analyzes sample phishing emails, identifies key indicators of phishing, classifies risk levels, and provides awareness guidelines to prevent such attacks.

2. Sample Emails

- Email 1

Subject: Urgent: Your Account Will Be Locked

Body:

Dear User,

We noticed suspicious activity on your account. To avoid suspension, please verify your account immediately.

Click here: <http://secure-account-verify.com>

Failure to verify within 24 hours will result in permanent account lock.

Security Team

- Email 2

Subject: You Have Won a Prize!

Body:

Congratulations! You have been selected as the winner of a lottery. To claim your reward, please provide your bank details and OTP verification.

Click here: <http://claim-reward-now.com>

Hurry! Limited time offer.

- Email 3

Subject: Password Reset Required

Body:

Dear Customer,

We detected unusual login activity. Please reset your password immediately using the link below:

<http://bank-reset-login.com>

If you do not act within 12 hours, your account will be suspended.

3. Analysis of Emails

☐ Email 1 Analysis

- Sender is unknown and not official
- Uses urgency (“account will be locked”)
- Fake link provided
- No personalization (uses “Dear User”)
- Creates fear to force action

✓ **Risk Level:** Phishing

☐ Email 2 Analysis

- Unrealistic offer (lottery prize)
- Requests sensitive information (bank details, OTP)
- Suspicious domain name
- Uses excitement and urgency

✓ **Risk Level:** Phishing

☐ Email 3 Analysis

- Fake security alert
- Suspicious login page link
- Urgent password reset demand
- No official company branding

✓ **Risk Level:** Phishing

4. Common Phishing Indicators

The following patterns were observed across all emails:

- Fake or unknown sender domains
- Urgency and fear-based messages
- Requests for sensitive information (password, OTP, bank details)
- Suspicious or unofficial URLs
- Generic greetings like “Dear User”
- Poor or inconsistent messaging style

5. How Phishing Attacks Work

Phishing attacks typically follow these steps:

1. Attacker sends a fake email pretending to be a trusted organization
2. The email creates urgency or emotional pressure
3. Victim clicks on a malicious link
4. Fake website collects sensitive information
5. Attacker uses stolen data for fraud or unauthorized access

These attacks succeed mainly due to lack of user awareness.

6. Prevention Guidelines

To stay safe from phishing attacks:

- Always verify sender email address
- Do not click on unknown or suspicious links
- Never share OTPs, passwords, or bank details via email
- Check website URLs carefully before logging in
- Use official websites instead of email links
- Report suspicious emails to IT/security teams

7. Do's and Don'ts

✓ Do's

- Verify email authenticity
- Use official websites
- Enable two-factor authentication
- Report phishing emails

✗ Don'ts

- Don't click random links
- Don't share personal credentials
- Don't trust urgent messages blindly
- Don't download unknown attachments

8. Conclusion

Phishing is one of the most common cyber threats targeting individuals and organizations. By understanding phishing techniques and identifying warning signs, users can significantly reduce the risk of becoming victims.

Awareness and caution are the most effective defenses against phishing attacks.
